Introduction

Background

The Office on Children and Youth (OCY) at James Madison University's Institute for Innovation in Health and Human Services (IIHHS) is pleased to present the Youth Data Survey 2013 for Harrisonburg and Rockingham County. The OCY has been working with the community since 1996 to provide key data about local youth risk behaviors and produce data which enables the community to develop priority areas around youth issues. Administered by the OCY, the Youth Data Survey (YDS) is a collaborative effort between many community partners including: United Way, Harrisonburg City and Rockingham County Public Schools, Eastern Mennonite High School, James Madison University, Healthy Community Council, Rockingham Memorial Hospital Community Health, the Strong Families-Great Youth Coalition, Blue Ridge Area Health Education Center, and the Futuro Latino Coalition. Over 50 agency representatives and community volunteers assist with the administration of the survey every two years. The goal of the YDS is to examine the current as well as longitudinal trends around local youth risk behaviors with an approach that taps into the larger community question of what assets we need in our community to help people successfully navigate from infancy to adulthood. The objectives of the YDS for the community are the following: produce reliable information on risk behaviors; assess needs; ascertain gaps in service; assist in determining priority areas; allow agencies access to local data in order to write successful state, federal, and foundation grant applications to address the identified needs; and evaluate progress over time on the impact agency programs have on the local youth. The ultimate goal is to improve the quality of life for the children and youth in Harrisonburg and Rockingham County.

Every two years in October the survey is administered to approximately half of all 8th, 10th, and 12th graders in Harrisonburg City and Rockingham County. The students complete two surveys: one is the nationally recognized Pride Survey; and the other is the locally created Youth Data Survey based in part on the national Youth Risk Behavior Survey. Every 10 years a committee comprised of local agency representatives and interested community members evaluate the survey and make any necessary additions and revisions. JMU students assist OCY staff and help secure and train agency representatives and community volunteers to administer the survey. This report would not be possible without the support of our local schools, community organizations and many dedicated volunteers.

The survey was administered during the week of October 21, 2013 to youth in Harrisonburg City and Rockingham County. Surveys were completed by 1,778 students (approximately 833 females and 724 males) between the ages of 13 and 19.

Navigation

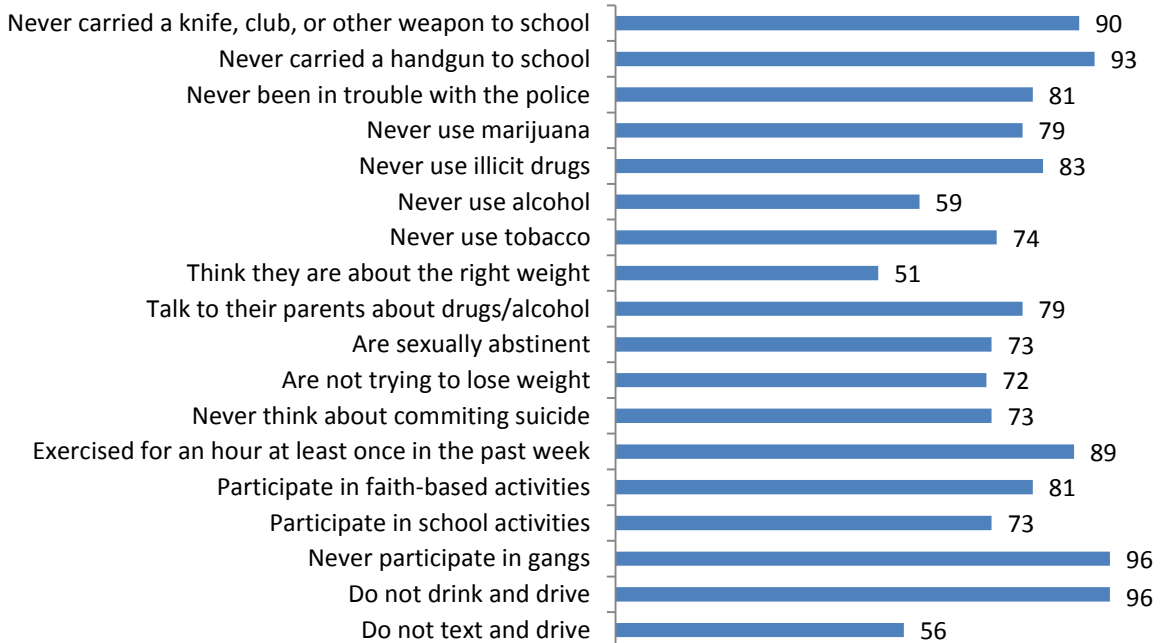

This report presents information on key issues affecting the youth in our community. The Quick Facts section gives an overview of the assets and risk factors present in our youth. The data is then presented by categories for a more detailed investigation of assets and risk factors. Following the categories you will find some supporting data on parents. The final section includes Topical Fact Sheets that provide at-a-glance information on selected risk factors. The surveys are included in the appendix for your reference.

Additional Information

In addition to the data presented in this report, the OCY is available to make specialized presentations or reports for any interested group. Please contact Kim Hartzler-Weakley at 568-7083 or hartzlkm@jmu.edu with requests. Also, archived data from all administrations of the Youth Data Survey (1997-2011) is available on the OCY web site (theocy.org).
